Key: T1 official (the company, a regulator or a court): can be acted on. T2 fast, reputable aggregator: act on it, then confirm. T3 fast but unconfirmed: never trade on it alone.
✓ feed fetched and working on 2 Oct · ✗ blocked or missing · ? not confirmed. All dates are in US Eastern Time (ET) unless marked otherwise.

1. Selected assets (39)

Group	Assets (ticker)
Chips	NVIDIA (NVDA), AMD (AMD), Intel (INTC), Taiwan Semiconductor (TSM), Broadcom (AVGO)
Memory & equipment	Micron (MU), SK Hynix (HY9H), ASML (ASML, Amsterdam)
Optical & networking	Lumentum (LITE), Corning (GLW), Cisco (CSCO)
Servers	Dell (DELL), Hewlett Packard Enterprise (HPE)
Software & cloud	Microsoft (MSFT), Oracle (ORCL), IBM (IBM), Cloudflare (NET), CrowdStrike (CRWD), Palantir (PLTR)
Platforms	Apple (AAPL), Meta (META), Alphabet (GOOGL), Amazon (AMZN)
Mobility & space	Uber (UBER), Tesla (TSLA), SpaceX (SPCX)
Defense	General Dynamics (GD), Northrop Grumman (NOC), Lockheed Martin (LMT), RTX (RTX)
Hedges	Walmart (WMT), Procter & Gamble (PG), Johnson & Johnson (JNJ), Eli Lilly (LLY), JPMorgan (JPM), Exxon Mobil (XOM), Netflix (NFLX), Amundi Physical Gold ETC (ISIN FR0013416716), iShares $ Treasury Bond 20+yr UCITS ETF USD (Acc) (DTLA, ISIN IE00BFM6TC58)

All 39 assets are on UMushroom. Removed from the first list: Coherent, Atlassian, MongoDB, HP Inc (HPQ; HPE kept), Samsung, the Fidelity slot, and SanDisk (only a 3x leveraged product there). Use **GOOGL** (the code refuses plain "Alphabet") and the **ISIN** for the two funds (two gold products share the ticker GOLD). Never buy the leveraged or options products that appear in the same searches ("3x Long/Short …", "IncomeShares … Options ETP").

Scoring: about half the points come from returns and half from completing daily activities, on a separate portfolio of 100,000 (GBP).
Hedge rules (for the agent): keep at least 15% of the portfolio in the hedges, normally 20%; move towards ~40% on broad bad news (export curbs, tariff threats, a market-wide sell-off), trimming chips and mobility first; at most 20% in any one group and 6% in one asset. Never borrow: UMushroom offers a 10% credit margin, so cash available must never go below zero; with almost no cash, every BUY is paired with a SELL. USD assets also carry GBP/USD currency risk.

Read before building

- **Most scheduled news comes out while the market is closed.** Earnings come out after the close or before the open, so UMushroom fills those orders at the next open. Speed in seconds only matters for news during trading hours: policy, scoops, outages. For earnings, reading the numbers correctly matters more than speed. For example, Cisco rose 8% after hours on 12 Aug 2026 and then *closed –8.9%* the next day.
- **Many company investor-relations (IR) sites block scripts** (Cloudflare or Akamai returns HTTP 403): Apple, Meta, Uber, Oracle, Cloudflare, Micron, GD, Broadcom, Amazon IR, Tesla, JPMorgan and Walmart. For those, use the newswire feed and SEC filings. Poll all feeds gently with backoff: some feeds start refusing after repeated calls.
- **Re-test every feed from the Windows machine.** Some blocks depend on the IP address.
- **Google News and Yahoo** are also read by the news bot (tier 2): faster coverage, but mostly rewrites that can make old news look new. Confirm with an official source before acting. Seeking Alpha and Motley Fool are opinion, not news.

2. Core sources (cover every asset)

Source	Feed / access	What to expect

T2 **Alpaca News API** (Benzinga)	`wss://stream.data.alpaca.markets/v1beta1/news` Free Alpaca account; REST limit 200/min. **?** Check that the free tier still includes the live stream.	The main feed. Covers 600–900 headlines a day, tagged by ticker, usually seconds after release. Company releases have sometimes been missing, so also read the company feeds directly.
T1 **SEC EDGAR**	`data.sec.gov/submissions/CIK##########.json` and per-company 8-K Atom feeds. Max 10 requests/s. The User-Agent must include a contact email; use a dedicated address, not a personal one.	8-K filings: results (item 2.02), major deals (1.01), executive changes (5.02), cyber incidents (1.05). 6-K filings from foreign companies (ASML, TSMC, SK Hynix). Usually minutes after the press release.
